DETAILED ACTION

1. Applicant's response dated April 28, 2004 has been entered in the above-identified application. Claim 28 has been amended. New claims 36-41 have been added.

Claims 1-41 are pending of which claims 28-41 are now under consideration.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 33-35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Independent claim 33 states that a strip agent is applied to "a dried waterborne radiation cured overcoat". It is unclear how the overcoat is both "dried" and "waterborne". Appropriate amendment to clarification is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1773

3. Claims 28-32 and 36-38 are rejected under 35 U.S.C. 102(b) as being anticipated by Wang et al. (US 5,494,707).

Wang et al. disclose a resilient floor covering comprising of a resilient support surface and a resilient wear surface adhered to said support surface and comprising an underlying wear layer based coat and an overlying wear layer top coat adhered to said wear layer base coat (Column 3, lines 61-68). The wear layer top coat is a hard thermoset UV curable blend of acrylates (Column 4, lines 7-10). The wear layer base coat has a thickness of 0.7 to 3.0 mils and the wear layer top coat has a thickness of 0.1 to 0.5 mils (Column 8, lines 35-45). Conventional substrate layer comprises materials typical of substrate layers found in the flooring art and include vinyl compositions (Column 9, lines 59-66). A preferred method is directed to providing a resilient floor covering comprising the steps of:

- (a) providing a resilient support surface;
- (b) applying to the top of and adhering to said resilient support surface, a wear surface, said wear surface being applied by applying a wear layer base coat comprising a flexible, thermoset, polymeric composition having a flexibility,
- (b2) partially curing said wear layer base coat;
- (b3) applying to the top of said wear layer base coat, a wear layer top coat comprising a hard, thermoset, UV-curable blend of acrylic or acrylate monomers, and
- (b4) completely curing said wear layer base coat and said wear layer top coat.

Art Unit: 1773

All limitations of claims 28-32 and 36-38 are disclosed in the above reference.

4. Claims 33-35, and 39-41 are rejected under 35 U.S.C. 102(b) as being anticipated by Hamrock et al. (WO 98/11168).

Hamrock et al. disclose a floor finishing system comprising a radiation curable composition and a primer composition wherein the primer composition is coatable over a substrate and the radiation curable composition is coatable thereon (Page 6, lines 25-30). The cured, coatable composition is readily strippable from the substrate when the latex primer is present (Page 7, lines 1-3). All limitations of claims 33-35 are disclosed in the above reference.

Response to Arguments

5. Applicant's arguments filed on April 28, 2004 have been fully considered but they are not persuasive. Applicants traverse the rejection of claims 33-35 under 35 U.S.C. 112, second paragraph, and submit that the overcoat is recited in claim 33 as a "dried waterborne" overcoat because it is dried and was waterborne. However, the phrase "dried waterborne" does not recite that the overcoat "was waterborne" and instead implies that *it is waterborne*. The examiner suggests amending the language to recite what the Applicants intend, i.e., that the overcoat *was waterborne*. Hence, the above rejection is maintained.
